## Awareness Program on AIDS

- ***What is AIDS:***

- Human immunodeficiency virus (HIV) is the virus that causes acquired immunodeficiency syndrome (AIDS). When a person becomes infected with HIV, the virus attacks and weakens the immune system. As the immune system weakens, the person is at risk of getting life-threatening infections and cancers.

- ***How long people can live with AIDS:***

- Many people living with HIV can expect to live as long as their peers who do not have HIV. Studies show that a person living with HIV has a similar life expectancy to an HIV-negative person – providing they are diagnosed in good time, have good access to medical care, and are able to adhere to their HIV treatment.

- ***Is AIDS as STD:***

- HIV is a sexually transmitted infection, but it can progress to a disease called acquired immunodeficiency syndrome (AIDS) when HIV infection is untreated with HIV medicines. Other examples of STDs are chlamydia, gonorrhea, human papillomavirus (HPV) infection, and syphilis.
- To foster early detection of HIV infection among persons with ongoing risk for HIV
- To enhance earlier referral to prevention and treatment
