Objectives of the course

A certificate course in Environmental Economics aim to aim to equip students with the tools and perspectives needed to understand, analyze, and address environmental problems within the context of economic decision-making and policy formulation.

1. **Understanding Environmental Issues:** To provide students with an understanding of key environmental challenges facing society, such as climate change, pollution, resource depletion, and biodiversity loss.
2. **Applying Economic Principles:** To teach students how economic concepts and theories can be applied to analyze environmental problems, assess their causes and impacts, and identify potential solutions.
3. **Evaluating Environmental Policies:** To enable students to evaluate the effectiveness of various environmental policies and regulations, including market-based instruments, command-and-control measures, and voluntary initiatives.
4. **Assessing Trade-offs:** To help students understand the trade-offs involved in environmental decision-making, such as balancing economic growth with environmental protection and considering short-term benefits versus long-term sustainability.
5. **Valuing Environmental Resources:** To teach students methods for valuing environmental goods and services, including non-market valuation techniques such as contingent valuation and hedonic pricing.
6. **Exploring Sustainable Development:** To introduce students to the concept of sustainable development and the integration of environmental, social, and economic objectives in policy-making and decision-making processes.
7. **Analyzing Cost-Benefit Trade-offs:** To enable students to conduct cost-benefit analyses of environmental projects and policies, considering both economic and environmental costs and benefits.
8. **Understanding Market Failures:** To familiarize students with market failures and externalities that lead to inefficient resource allocation and environmental degradation and explore potential remedies.

Course Outcomes

1. **Understanding Environmental Issues:** Students will demonstrate a comprehensive understanding of key environmental challenges, including climate change, pollution, resource depletion, and biodiversity loss.
2. **Applying Economic Principles:** Students will be able to apply economic concepts and theories to analyze environmental problems, assess their causes and impacts, and identify potential solutions.
3. **Assessing Trade-offs:** Students will understand the trade-offs involved in environmental decision-making, such as balancing economic growth with environmental protection and considering short-term benefits versus long-term sustainability.
4. **Promoting Sustainable Development:** Students will understand the concept of sustainable development and the integration of environmental, social, and economic objectives in policy-making and decision-making processes.
5. **Analyzing Cost-Benefit Trade-offs:** Students will be able to conduct cost-benefit analyses of environmental projects and policies, considering both economic and environmental costs and benefits.
6. **Promoting Green Growth:** Students will be familiar with strategies for promoting green growth and sustainable economic development, including investments in clean technologies, renewable energy, and resource efficiency.
7. **Examining Global Environmental Challenges:** Students will understand global environmental challenges, such as transboundary pollution, deforestation, loss of biodiversity, and their implications for international cooperation and governance.
8. **Addressing Environmental Justice:** Students will be able to analyze issues of environmental justice and equity, including the unequal distribution of environmental benefits and burdens among different social groups and communities.
